

Nuisance Birds CAN be Controlled!

“We have fogged a considerable number and variety of sites, and we have found NO species of bird that will not respond to the MA stimulus.”

~Jeffrey Ling, President,
Flock Fighters USA

Research and field trials have clearly shown that Methyl Anthranilate (MA), the effective ingredient in **Fog Force**, affects birds. It moves them out. Applying **Fog Force** directly and correctly to the birds makes them graphically exit the site with no known harmful effect on the birds or other organisms.

Fog Force is the only MA formulation applied by aerosol. Fogging and misting procedures apply the product to the birds efficiently and cost-effectively.

FLOCK FIGHTERS USA recognizes that each site is unique in need: by geography, by climate, by function, and by numbers and species of birds. We administer technologies and procedures to match the requirements of each site and species of birds.

Proper practice allows any size of building or structure, bodies of water, groves of trees, any amount of acreage to be bird free . . . immediately and permanently.

Flock Fighters USA has expelled more birds than any other applicator. Please call us if you have a question regarding YOUR site.

Flock Fighters USA also supplies more product and equipment than any other supplier. We provide the training and support necessary to make you successful in chemical bird aversion.

This publication is for promotional purposes only and is not to be considered instructional material. Please consult product label for further clarification and for specific instructions.

All about

Fog Force

Bird repellent for:

- ‡ All areas ‡
- ‡ Structures and buildings ‡
- ‡ Factories and industrial areas ‡
- ‡ Airports and open areas ‡
- ‡ Parks and golf courses ‡
- ‡ Around lakes, ponds and harbors ‡

- ‡ All birds ‡
- ‡ Pigeons ‡
- ‡ Starlings ‡
- ‡ Canada Geese ‡
- ‡ Grackles ‡
- ‡ Gulls ‡
- ‡ English Sparrows ‡

FLOCK FIGHTERS USA

Fog Force is EFFECTIVE.

Until now, there have been few options for the control of the flocks of birds that invade and contaminate a site other than killing them. Many gimmicks have been promoted, proven as failures, and discarded: nuisance bird populations and problems continue to grow.

Birds are stimulated to claim a structure because it physically fits their needs. I-beams or girders in industrial sites, power stations or architectural features in buildings, groupings of trees in a landscape: all these provide convenient perches for large numbers of birds.

Many man-made environments provide support for birds' behavior. Containment ponds are an ideal habitat for waterfowl. Trees in urban landscapes provide permanent, comfortable perches with protection for social flockers, which prosper in a city environment. Airfields simulate prairies and offer birds long unobstructed views to be safe from predators. Landfills and trash containers offer a smorgasbord daily. It is clear that the birds will stay as long as man-made environments match a bird species habitat requirement.

WHAT is Fog Force?

Fog Force is a bird repellent that may be used indoors and outdoors to repel all types of birds, including starlings, black-birds, gulls, Canada geese and any other bird that has become a nuisance or a

Fog Force is EFFICIENT.

health hazard in an area.

Because Fog Force is applied in a fog instead of a spray, the amount of repellent is greatly reduced over other control methods. Also, Fog Force is more convenient than other methods because applications do not have to be done on subsequent days. There can be several days between each fogging if the weather conditions are not favorable.

Fog Force is benign to the environment and leaves no residue.

WHY does Fog Force work?

Since 1960, Methyl Anthralinate (MA), the active ingredient in Fog Force, has been known as an effective bird aversion chemical. Using this naturally occurring compound that is found in flowers and in grapes, Fog Force works as a repellent by stimulating the trigeminal nerves in the bird's beak, eyes and throat. Although most animals have these nerves, only birds react to MA. Other animals sense Fog Force as a pleasant grape scent. As a result of this painful stimulus, birds typically avoid areas where Fog Force has been applied.

HOW is Fog Force used?

Fog Force is best applied by a thermal or ULV fog generator that will deliver a dry fog with a droplet size of less than 30 microns. The smaller droplet size allows Fog Force to remain suspended above the

Fog Force is ESSENTIAL.

ground, increasing its efficacy.

Fog Force should be applied at a rate of 1-4 oz. per 100,000 cubic feet of space to be treated. Applications may be repeated for as long as birds persist, and may be fully automated if desired. Subsequent applications (1-6 applications are typical) often require less product than the initial application.

Best results are achieved when birds congregate in the early evening and settle for the night, or in the early morning when they look for their preferred feeding grounds. It is important to expose as many birds as possible to the initial application.

WHERE can I buy Fog Force?

Fog Force is available in 1 gallon and 2.5 gallon containers from Flock Fighters USA. Thermal and ULV foggers are also available. Shipping and Handling is waived on all case orders of Fog Force and all fogger purchases.

Flock Fighters USA is committed to your success! We offer free support with all purchases, and will even treat your site for you. Call for an estimate.

Other products are also offered by Flock Fighters USA:

CROP GUARDIAN: for grapes, blueberries and cherries

MIGRATE: turf applied goose repellent
