

No Birds!

Food Products Containing Methyl Anthranilate (the active ingredient in Fog Force™)

Fruit Juices	16 ppm
Alcoholic Beverages	.02 ppm
Ice Cream/sherberts	21 ppm
Candy	56 ppm
Baked goods	20 ppm
Gelatins/puddings	23 ppm
Chewing gum	2220 ppm

Naturally Occurring Sources of Methyl Anthranilate

Concord Grapes
Orange Blossoms
Jasmine Blossoms
Acacia Blossoms
Gardenia Blossoms
Neroli Oil

* EPA Est. No. 071638-OH-001

Put Distance Between You and Birds!

Fog Force™ may be used indoors and outdoors to repel all birds such as Canada geese, starlings, blackbirds, cowbirds, gulls, mallards and other birds that have become a nuisance or health hazard in many diverse areas. The fog irritates birds' eyes and mucous membranes and will repel established flocks for the season without permanent damage to them or the environment!

What is Fog Force™?

Fog Force™ is an aerosol bird repellent formulated from Methyl Anthranilate and used for the non-lethal control of birds. Methyl Anthranilate, the active ingredient, is a food grade repellent that exceeds US Food Chemical Codes (FCC) specifications, and is classified as Generally Recognized As Safe (GRAS) by the Expert Panel of the Flavor & Extract Manufacturers Association (FEMA). Methyl Anthranilate is an additive to foods, food flavors, and fragrances and is used as a flavoring agent in beverages, ice creams, candy, gelatins, puddings and chewing gum.

Fog Force™ is best applied by hazing or fogging. Fogging will provide immediate results and the amount of repellent used is greatly reduced over other control methods. The applications can be manual or fully automated. Usually 1-6 applications of 2.5 ounces per acre are sufficient to repel established flocks of birds for the season.

Does it Work on all Birds?

Yes. There are no known species of bird that are not affected.

How Does Fogging Work?

The birds must be exposed to the fog and inhale it to be effective. Fogging works with all birds. They do not have to eat the product. Birds will associate the pain stimulus with the site, learning that the site is not desirable. The grape-like odor does not work as a repellent. It requires the higher concentrations of the aerosol droplets, which have a great impact on birds quickly.

How Do I Use Fog Force™ in a Fogger?

Fog Force™ may be used in either thermal or mechanical foggers (Ultra Low Volume Foggers – ULV's). Follow the manufacturer's instructions for the fogger. For best results, use a low to medium setting below 30 microns that generates a "dry" fog that penetrates bushes and trees without any discoloration. To keep birds away from re-infestation in small areas, mechanical foggers (electrical or compressed air) are very useful.

When is the Best Time to Fog?

For best results, it is important to expose as many birds as possible to the aerosol in the first two applications. Either fog in the early morning when they look for their preferred feeding ground, or in the early evening when they settle down for the night. Make sure there is enough daylight available for the birds to leave to find an alternate roosting site once they are exposed. It takes time for them to find a new home and new feeding ground. Successive applications require less product than the first.
