

BOTTLE BLASTER

The newest (and least expensive) delivery tool for aerosol bird aversion.

The Bird Blaster aerosol delivery system was created and installed in October, 1999, to meet the safety requirements and bird control parameters of the Shell Oil's Wood River, Illinois refinery.

Utilizing RejeX-it Fog Force, the nations' only aerosol bird repellent, this process delivered the desire relief. Bird Blasters are now being used by many Class 1 manufacturing sites, with nuisance birds problems.

Thoroughly tested, the environmentally benign, Fog Force is being used by American and European utilities to expel nuisance birds in energized systems.

No matter the sites needs or limitations, Fog Force aerosols and the Bird Blaster can make the site bird free with no risks to people or the change in operations!

In 2005, the "Blaster" concept was taken to the next level, with the

"BOTTLE BLASTER"

The same pneumatic performance of the Bird Blaster is now available in a smaller, lower cost option.

Utilizing the original container carrying Fog Force and any low cost source of compressed air, this method delivers Fog Force aerosols to any site!
indoors or out!
in any weather!

Indoors, the aerosol repellent can be hung from rafters, or placed on beams or ledges. The fog expands and fills the structure, evacuating the birds with each released. It will not produce a residue. When the compressor is connected to a timer, it makes an automatic delivery system.

Outdoor applications include roofs, overhangs, trees and agricultural feed lots and commodity bunkers. The Bottle Blaster, does not produce phytotoxicity in trees, turf or shrubs.

Direct - Expansive - Low Cost

BOTTLE BLASTER
Is the new standard
for aerosol bird control!
