

# BIRD CONTROL

for the Modern Setting

Until now, there have been few options for the control of the flocks of birds that invade and contaminate a site other than killing them. Many gimmicks have been promoted, proven as failures, and discarded: nuisance bird populations and problems continue to grow.

## **BIRDS PREFER CERTAIN SITES:** why

Birds are stimulated to claim a structure because it physically fits their needs. I-beams or girders in industrial sites, power stations or architectural features in buildings, groupings of trees in a landscape: all these provide convenient perches for large numbers of birds.

Another motivation for birds to roost is heat generation. Whether a transformer, a heating-cooling unit, or a whole generating plant or refinery, the warmth produced draws birds, particularly in the cool seasons.

Many man-made environments provide support for birds' behavior. Containment ponds are an ideal habitat for waterfowl. Trees in urban landscapes provide permanent, comfortable perches with protection for social flocks, which prosper in a city environment. Airfields simulate prairies and offer birds long unobstructed views to be safe from predators. Landfills and trash containers offer a smorgasbord daily. It is clear that **the birds will stay as long as man-made environments match a bird species habitat requirement.**

## **CONTROLLING NUISANCE BIRDS:** how

Research and field experience have clearly shown that **MA**, Methyl Anthranilate, affects birds; Rejexit Fog Force is the only **MA** formulation that is applied by aerosol. Applying **MA** aerosols to the birds results in their graphic exit from the site with no known harmful effects on the birds or other organisms. Proper application allows any size structure, body of water, grove of trees, or any amount of acreage to be bird free - efficiently, cost-effectively, and **permanently.**

Flock Fighters USA recognizes that each site is unique in need: by geography, by climate, by function, and by the number and species of birds present. We provide goal-oriented consultation to clients, and we offer the technologies and procedures to match the requirements of each site. **MA** aerosols are environmentally benign and risk-free to the applicator and non-target animals when properly applied.

**MA** is also available in a variety of other products. Contact us directly for more information about your site.

Clear thinking and workable solutions in reduced-risk chemical bird aversion
